Calico Energy Services and Digi Partner to Enable Smart Grid Technologies for Energy and Demand Management

Jan 24, 2011 (Close-Up Media via COMTEX) -- Calico Energy Services, a provider of smart grid data management solutions and services for utilities and power providers, and Digi International announced the availability of an integrated smart grid technology solution for energy and demand management.

The solution is built upon the Digi X-Grid platform which provides device connectivity infrastructure, and Calico Energy's EIS platform, which provides a complete utility energy management solution coupled with residential and commercial load control.

"The Digi solution provides a critical communication link in the smart grid value chain, enabling utilities to connect with their customers to provide them with enhanced services and an elevated customer experience," said Brian Dawson, CEO of Calico Energy Services. "We're honored to partner with Digi and to provide our customers with the highest quality hardware and devices they need for a secure and reliable end-to-end energy management solution." With tens of thousands of Smart Energy gateways deployed, Digi is a

provider of solutions that offer the ability to integrate with many vendors' products. The Digi X-Grid solution enables real-time, IP-based monitoring and control of home energy devices beyond the electric meter. It provides real-time access to energy usage information, real-time control of energy consuming devices and real-time management of energy producing capabilities.

Calico Energy provides an energy management software platform for utilities and power providers. The company's flagship product, Energy Intelligence Suite, is a software service that provides modular solutions for Smart Grid integration and enablement. These include: energy data aggregation and analytics, command and control, demand side management and technologies that engage customers in long-term strategies for efficiency and energy reduction.
