

# Cellular gateway connects remote devices

**D**igi International has introduced the ConnectPort X3 H, a rugged programmable cellular gateway for monitoring remote assets in harsh environments. Featuring advanced battery power features and a NEMA 4X/IP66 enclosure to protect the gateway from water, dust and dirt, the ConnectPort X3 H is suitable for tank monitoring, pipeline, agriculture, utility and other rugged applications. The ConnectPort X3 H is integrated with the iDigi platform, a cloud computing service that makes it easy to remotely manage devices and integrate device information into a company's back-end systems.

"The rugged features of the ConnectPort X3 H allow customers to reliably extend their device networks into the harshest of environments where power may not be available," says Larry Kraft, senior vice president of global sales and marketing, Digi International. "It is designed to connect remote devices in manufacturing and industrial environments where exposure to volatile liquids, gases and severe temperatures is common."

The ConnectPort X3 H provides global connectivity to remote devices and device/sensor networks via GSM GPRS cellular networks. It is Class 1, Division 2 certified and features multiple power options including mains power, battery power or battery power with solar charger panel for harsh environments where there is no power. It has advanced power management features with a sleep function which shuts down the device when it is not running to conserve battery power.

The ConnectPort X3 H is available with an optional embedded XBee ZigBee module allowing the gateway to connect to a small network of ZigBee-enabled wireless devices or sensors for local data aggregation over a cellular network.

It also features an optional analog I/O, digital I/O or RS-232 serial port for direct wired connectivity. Internal GPS is available for asset tracking. It is shipped iDigi ready and is available. It is certified by AT&T and works on virtually any GSM network around the world.
