

## Digi Cellular Routers Enable Remote Payment Card Industry (PCI) Compliant Networks

MINNETONKA, Minn., Jul 28, 2009 (BUSINESS WIRE) --

Company: Digi International Inc. (DGII)

[Digi International](#) (NASDAQ: DGII) today announced that its cellular router families are able to be configured for use in remote point of sale and financial IP networks where Payment Card Industry Data Security Standards (PCI DSS) compliance is required. The PCI DSS security standard includes guidelines for security management, policies, procedures, network architecture, software design and other critical protective measures to help organizations protect customer account data. Digi cellular routers can be part of a PCI DSS compliant system and provide secure connectivity to remote devices via cellular and/or Asymmetric Digital Subscriber Line (ADSL) connections.

"Without PCI compliance, companies are at risk of attack and face higher levels of liability," said Larry Kraft, senior vice president of global sales and marketing, [Digi International](#). "Because Digi cellular routers meet stringent industry standards, they enable companies to deploy a PCI compliant system for remote transactions."

Digi TransPort(TM), Digi Connect(R) WAN, ConnectPort(TM) WAN and Digi Wi-Point 3G (R) cellular routers can be used as part of a PCI DSS compliant system. Digi TransPort family can provide standalone PCI compliant WAN connections and can initiate/terminate IPsec or SSL VPN connections to enable secure payment card transactions. The products also provide stateful inspection firewall, network segmentation via VLAN or Ethernet port isolation, configurable user levels and remote authentication, full event logging which can be stored via Syslog, and MAC filtering to prevent unwanted client access authentication via X.509 digital certificates.

Digi Connect WAN, ConnectPort WAN and Digi Wi-Point 3G cellular routers can be used as components of a PCI compliant system when in pass-through mode from another router or security appliance.

Understanding the components of a PCI compliant architecture can be challenging. For information to help simplify this process, as well as tips for selecting the right cellular/ADSL router for a remote PCI compliant system, please download a free white paper and Podcast at <http://www.digi.com/standards/pci-dss/>.
