

Digi selects Ericsson to provide 3G cellular connectivity for M2M applications

Digi International has selected Ericsson to provide 3G cellular connectivity for machine-to-machine applications.

Digi has said that it is using Ericsson's 3G HSPA modules to enable high-speed cellular connectivity across select Digi Connect and Digi TransPort cellular gateways. Digi cellular gateways provide primary and backup connectivity via high-speed 3G connections to remote sites and devices.

Larry Kraft, senior vice president of global sales and marketing at Digi International, said: "We are excited to work with Ericsson, a global leader in 3G mobile broadband network technology. The collaboration allows for rapid global adoption of Digi gateways with strategic carriers where Ericsson relationships already exist.

"Customers can now realize high-speed network connectivity with the global leaders in machine-to-machine (M2M) wireless connectivity and 3G HSPA mobile technology."
