New ConnectPort X3 H Cellular Gateway from Digi Connects Remote Devices in Harsh Environments

0

Digg ↑

By BusinessWire

MINNETONKA, Minn., BUSINESS WIRE --

[Digi International](#) (NASDAQ: DGII) today introduced the ConnectPort X3 H, a rugged programmable cellular gateway for monitoring remote assets in harsh environments. Featuring advanced battery power features and a NEMA 4X/IP66 enclosure to protect the gateway from water, dust and dirt, the ConnectPort X3 H is ideal for tank monitoring, pipeline, agriculture, utility and other rugged applications. The ConnectPort X3 H is integrated with the [iDigi platform](#), a cloud computing service that makes it easy to remotely manage devices and integrate device information into a company's back-end systems.

'The rugged features of the ConnectPort X3 H allow customers to reliably extend their device networks into the harshest of environments where power may not be available,' said Larry Kraft, senior vice president of global sales and marketing, Digi International. 'It is designed to connect remote devices in manufacturing and industrial environments where exposure to volatile liquids, gases and severe temperatures is common.'

Go to Facebook.com

The ConnectPort X3 H provides global connectivity to remote devices and device/sensor networks via GSM GPRS cellular networks. It is Class 1, Division 2 certified and features multiple power options including mains power, battery power or battery power with solar charger panel for harsh environments where power may not be available. It has advanced power management features including a sleep function which shuts down a device when it is not running to conserve battery power.

The ConnectPort X3 H is available with an optional embedded [XBee](#) ZigBee module allowing the gateway to connect to a small network of ZigBee-enabled wireless devices or sensors for local data aggregation over a cellular network. It also features an optional analog I/O, digital I/O or RS-232 serial port for direct wired connectivity. Optional internal GPS is also available for asset tracking.

Featuring an easy-to-use development environment, the ConnectPort X3 H can be programmed using open-source Python or the iDigi Device Integration Application (iDigi Dia). It also includes a familiar Eclipse-based integrated development environment that allows Web developers to rapidly develop embedded applications.

The ConnectPort X3 H is shipped iDigi ready and is available to qualified customers now starting at \$438 MSRP, and generally available in January 2011. It is certified by AT&T and works on virtually any GSM network around the world. For more information about the ConnectPort X3 H, visit www.digi.com/x3. For more information about iDigi, visit www.idigi.com.

About Digi International

Digi International is making wireless M2M easy by developing reliable products and solutions to connect and securely manage local or remote electronic devices over the network or via the Web. Digi offers the highest levels of performance, flexibility and quality, and markets its products through a global network of distributors and resellers, systems integrators and original equipment manufacturers (OEMs). For more information, visit Digi's Web site at www.digi.com, or call 877-912-3444.
