

## Digi launches fleet management telematics devices

Digi International introduces the ConnectPort X5 family of compact, ruggedised telematics devices with optional satellite functionality incorporating cellular, satellite, GPS, Wi-Fi and vehicle area network wireless technology in one device. The ConnectPort X5 family is tailored specifically for the demands of fleet management applications.

Cellular and satellite connectivity provide instant, always-on communications, allowing companies to switch networks easily. Wi-Fi provides a cost-effective way to transfer less critical/time-sensitive information such as logs, firmware upgrades and larger files across low-cost private or public Wi-Fi networks. Wi-Fi can also be used to network in vehicle or near vehicle Wi-Fi enabled devices like vehicle displays and handheld mobile devices. On-board GPS enables location tracking and geo-fencing. For customers choosing the optional satellite version, the ConnectPort X5 also includes a dome enclosure that optimises RF performance and dramatically simplifies and reduces the cost of cabling and installation.

The ConnectPort X5 family includes the "brick style" ConnectPort X5 and dome/roof mounted ConnectPort X5 Fleet. Both products are encased in rugged IP67 enclosures and are SAE1455 certified.
