Digi: multi-function wireless programmable terminal server

Digi International introduces the ConnectPort LTS multi-function wireless programmable terminal server. The ConnectPort LTS provides serial-to-IP connectivity and optional ZigBee wireless communications. This minimizes equipment space requirements and reduces cost by combining a terminal server and wireless gateway in one device. The ConnectPort LTS is ideal for utilities, security, building automation, retail, industrial automation, healthcare, data center management and other applications.

ConnectPort LTS serial servers deliver secure, reliable, flexible and cost-effective RS-232/422/485 serial-to-Ethernet connectivity and are available in eight, 16 and 32-port options. The wireless version features ZigBee communications, an internal modem and USB 2.0 ports for expandability. All ConnectPort LTS serial servers include dual GB Ethernet for extreme reliability, an SD memory slot for data storage and a large LCD screen for easy configuration, monitoring and diagnostics. The Linux-based ConnectPort LTS is programmable with Python support and a software development kit. Advanced software features include an IPv4/v6 dual stack, user port sharing, port logging, SSHv2 and SSL.
