Digi Cellular Routers Meet Payment Card Industry Data Security Standards

Posted by EDA Geek News Staff in [Wireless](#) on Tuesday, July 28, 2009

[Virage Logic Announces SiPro PCI Express Gen1/Gen2 Physical Layer](#) »

« [Open SystemC Initiative Shares TLM WG, Synthesis WG, AMS WG Milestones](#)

Digi International (NASDAQ: DGI) announced that its cellular router families are able to be configured for use in remote point of sale and financial IP networks where Payment Card Industry Data Security Standards (PCI DSS) compliance is required. The PCI DSS security standard includes guidelines for security management, policies, procedures, network architecture, software design and other critical protective measures to help organizations protect customer account data. Digi cellular routers can be part of a PCI DSS compliant system and provide secure connectivity to remote devices via cellular and/or Asymmetric Digital Subscriber Line (ADSL) connections.

Advertisements by Google

"Without PCI compliance, companies are at risk of attack and face higher levels of liability," said Larry Kraft, senior vice president of global sales and marketing, Digi International. "Because Digi cellular routers meet stringent industry standards, they enable companies to deploy a PCI compliant system for remote transactions."

Digi TransPort[tm] , Digi Connect® WAN, ConnectPort[tm] WAN and Digi Wi-Point 3G® cellular routers can be used as part of a PCI DSS compliant system. Digi TransPort family can provide standalone PCI compliant WAN connections and can initiate/terminate IPsec or SSL VPN connections to enable secure payment card transactions. The products also provide stateful inspection firewall, network segmentation via VLAN or Ethernet port isolation, configurable user levels and remote authentication, full event logging which can be stored via Syslog, and MAC filtering to prevent unwanted client access authentication via X.509 digital certificates.

Digi Connect WAN, ConnectPort WAN and Digi Wi-Point 3G cellular routers can be used as components of a PCI compliant system when in pass-through mode from another router or security appliance.

Understanding the components of a PCI compliant architecture can be challenging. For information to help simplify this process, as well as tips for selecting the right cellular/ADSL router for a remote PCI compliant system, please download a free white paper and Podcast at www.digi.com/standards/pci-dss/. For more information about Digi cellular routers, visit www.digi.com/products/cellulargateways/.

About Digi International

Digi International is making wireless M2M easy by developing reliable products and solutions to connect and securely manage local or remote electronic devices over the network or via the Web. Digi offers the highest levels of performance, flexibility and quality, and markets its products through a global network of distributors and resellers, systems integrators and original equipment manufacturers (OEMs). For more information, call [877-912-3444](tel:+18779123444).
