CAMBRIDGE, UK — Digi launches the igi TransPort WR44, an all-in-one 3G cellular router designed for high-speed networking of mobile hotspots, remote payment processing, remote office and other remote networking applications.

The multi-function Digi TransPort WR44 provides connectivity to remote devices by combining a 3G cellular router, state-of-the-art security, advanced routing, an Ethernet switch, global positioning system (GPS), telemetry and Wi-Fi access point all in one device.

This unique combination of enterprise-class features and flexible wireless functionality makes the router well suited for connecting remote devices in vertical applications such as transportation, remote office and retail point-of-sale.

The unit can be used as a mobile hotspot in transportation applications such as in public safety vehicles, or on a bus, train, van or ship. It is also suitable for providing both primary and back-up connectivity to remote office networks.

The module comes with diverse power options, multiple mounting options, a rugged design, local scripting, advanced dynamic routing, state-of-the-art security and firewall features including stateful packet inspection and integrated IPsec VPN.

Enterprise-class protocols incorporate BGP, OSPF and VRRP+, a patented technology built upon the popular VRRP failover standard providing true auto sensing, auto failure and auto recovery of any line drop.

Various configurations are available including multiple serial ports (async or sync), GPS or I/O telemetry modules, a USB port and a four-port Ethernet switch.

Additionally, the Digi Transport WR44 can be fully managed using Digi's Remote Manager software for easy setup, configuration and maintenance of large installations.
