

Enhancing Automation and Internet Connectivity

Cellular router

Digi International: The TransPort WR44 cellular router is an all-in-one mobile communications solution with true enterprise-class routing, security and firewall. This multifunction cellular router features a flexible design with integrated Wi-Fi access point, USB, serial and 4-port Ethernet switch. Configuration options include multiple serial ports (async or sync), GPS or I/O telemetry modules.

The router incorporates Qualcomm Gobi technology which supports either High Speed Packet Access (HSPA) or Evolution-Data Optimised (EV-DO) networks on the same cellular radio – allowing the device to connect to virtually any cellular network in the world.
