

WIRELESS GREEN DESIGN COMPETITION

Digi International is challenging all engineers, hobbyists, students and anyone interested in wireless technology and the environment to develop a sustainable application using the Digi X4, Wi-9P or BLS4100 kit.

Contestants may choose from the following environmentally-themed categories:

- Energy saving for electrical consumption
- Energy saving for water consumption
- Energy saving for natural gas or fuel consumption
- Eliminating or monitoring air pollution

The contest will award more than \$20,000 in total prize money over the course of the next 12 months, including annual and quarterly prizes. The contest begins April 1, 2009 and ends March 31, 2010.

"Our new iDigi development kits make it fast, easy and inexpensive to develop green applications," said Joel Young, CTO and senior vice president of research and development, Digi International. "We expect to see some exciting and innovative green wireless applications, and look forward to judging contestants' designs."
