Comverge selects Digi X Grid solution

Oct 21, 2010 (Datamonitor via COMTEX) -- Digi International has announced that Comverge has selected Digi X-Grid solution to integrate Itron ERT meters into its intelligent energy management platform.

The Digi X-Grid solution is an 'Extended Grid' that allows utilities to inform, empower and engage customers through real-time, IP-based monitoring and control of energy devices that exist beyond the electric meter.

It enables online access of Itron ERT metering data on the Comverge IntelliSOURCE platform. This allows utilities to access real-time actionable energy consumption data using existing investments in adaptive multi-rate meters and network systems.

Digi X-Grid solutions include the new ERT/ethernet gateway and ERT/smart energy bridge. The products enable utilities to offer a range of demand-side management services with or without a smart meter network in place.

The products extend the grid into a utility's customers' homes supporting a full-range of smart energy thermostats, appliances and smart energy home area network devices. Digi ERT products are ERT certified by Itron and support all ERT bubble-up utility meters.

Bud Vos, chief technology officer of Comverge, said: "The Digi X-Grid solution made it easy for us to quickly integrate support of real-time data from Itron ERT meters. This extends the Comverge IntelliSOURCE platform and helps utilities's transition to the Smart Grid by allowing them to leverage existing networks and meters. Within a matter of weeks we were able to offer this valuable solution to our customers." <http://www.datamonitor.com>
