

SMT and SPI added to Zigbee modules

Digi has introduced the XBee and XBee-Pro ZB embedded Zigbee modules based on the Ember EM357 SoC. The modules add surface mount technology and the SPI serial peripheral interface to the family.

The SMT modules are suitable for high-volume applications in the energy and controls markets where manufacturing efficiencies are critical. The addition of the SPI provides high-speed throughput and optimises integration with embedded microcontrollers lowering costs of development and shortening time to market.

The modules use Zigbee Smart

Energy-ready firmware for supporting the implementation of each of the eight devices defined in the Zigbee Smart Energy public application profile.
