Digi TransPort VC7400 integration with Digi TransPort and Digi Connect® cellular router reduces complexity of VPN setup; increases reliability

MINNETONKA, Minn. (June 30, 2009) - Digi International (NASDAQ: DGII) today introduced the Digi TransPort VC7400, an enterprise-class virtual private network (VPN) concentrator that provides easy, secure connectivity to large installations of remote cellular or wired devices.

"VPN setups are often the most difficult configuration issue when networking to remote routers and devices," said Larry Kraft, senior vice president of global sales and marketing, Digi International. "With an end-to-end Digi VPN solution, configuration can be done in minutes instead of hours or even days. It also streamlines customer support and ensures a more reliable connection."

The Digi TransPort VC7400 is ideal for connecting thousands of remote devices using Digi Connect WAN, ConnectPort(TM) WAN and Digi TransPort cellular routers. The Digi TransPort VC7400 supports up to 3,000 simultaneous clients and features a 1 Gb/S Ethernet port, a 4-port 10/100Mb/s Ethernet switch (plus 1 DMZ port) and a front panel color LCD screen for displaying statistical and performance data.

Available in a compact 2U rack mountable design, the Digi TransPort VC7400 features advanced security including IPSec and SSL VPN (open VPN compatible) using DES/3DES and AES encryption with up to 256 bit key lengths. Dual redundant, hot swappable power supplies are also available to ensure maximum uptime. The Digi TransPort VC7400 also supports high-speed protocol switching of XOT, X.25 and TCP for retail/point-of-sale (POS) applications.

The Digi TransPort VC7400 is available for \$3,600 MSRP. For more information, visit www.digi.com/vc7400.

About Digi International

Digi International is making wireless M2M easy by developing reliable products and solutions to connect and securely manage local or remote electronic devices over the network or via the Web. Digi offers the highest levels of performance, flexibility and quality, and markets its products through a global network of distributors and resellers, systems integrators and original equipment manufacturers (OEMs).
