Peabody Engineering Integrates TankVista, Now Offers Clients End-to-End Tank Manufacturing and Online Remote Monitoring Capabilities (Re-selling New Boundary Technologies' TankVista as Tank WATCH-IT opens new opportunities for information management for Peabody Engineering clients)
 MINNEAPOLIS, Feb 14, 2011 (BUSINESS WIRE) -- New Boundary Technologies(R) today announced Peabody Engineering, an industry leader in tank management systems, has integrated New Boundary Technologies' TankVista(TM) remote monitoring and control software into its newly released Tank WATCH-IT remote tank monitoring solution.

TankVista collects and aggregates raw tank sensor data and converts it into actionable information, graphs and maps, all readily available from any computer with an Internet connection. Specifically, TankVista's cloud-based mapping features allow users to remotely visualize tank locations and conditions, and quickly identify tanks in need of refill or service without the need for physical site visits that include manual, unsafe and often less-than-accurate measuring techniques.

"Re-selling TankVista as Tank WATCH-IT enables us to deliver a new service offering and provides more advanced asset tracking tools for our clients," said Mark Peabody, chief executive officer of Peabody Engineering. "Our clients want to improve operational efficiencies through remote tank monitoring, and Tank WATCH-IT allows us to help them do so by offering a complete, end-to-end tank manufacturing and remote monitoring experience."

Peabody Engineering's Tank WATCH-IT solution also seamlessly integrates TankVista with Digi International's iDigi(TM) Tank -- a wireless machine-to-

machine (M2M) solutions bundle that includes the tank sensors, hardware, hosted software and additional services needed to quickly and easily connect remote tank assets. Peabody Engineering can install and pre-configure Tank WATCH-IT sensors and networking equipment prior to client delivery and installation for even greater time and cost savings.

"TankVista is a game-changer in the remote tank management and commercial storage industry," said Kim Pearson, chief executive officer of New Boundary Technologies. "We look forward to working with progressive tank manufacturers such as Peabody Engineering to help them grow their own profit margins while their clients do the same through effective remote monitoring and control."

Additional TankVista Features Now Part of Tank WATCH-IT

Automatic email/cell phone alerts when tank conditions meet user-defined thresholds and require servicing. Advanced reporting features that maintain tank condition history for operational analysis and regulatory compliance. End-to-end encryption and authentication technologies ensure continual data security. Open and highly scalable architecture creates seamless integration with other M2M technologies and does not limit the number of tanks that can be networked. Rich Internet Application (RIA) Web management console delivers intuitive, easy-to-use interface. Hosted service eliminates need to install/maintain software or custom applications.

About Peabody Engineering

Peabody Engineering, headquartered in Corona, Calif., is a manufacturer and distributor of various products to a wide range of markets housed in two divisions: Fluid Storage and Handling Products, and Telecommunications Screening Concealment Products. Peabody Engineering's commitment is to provide the most intuitively designed, high quality products to customers available anywhere by developing the best possible solution for applications based upon individual requirements, schedule and budget.
