## **Digi, GEO Working Together On Energy Management**

Renew Grid, Wednesday 09 February 2011 - 09:12:12

[Digi International](#) and [Green Energy Options](#) (GEO) say they are entering a joint collaboration agreement to develop a real-time, Web-based energy-management system for the European utility market. The new energy-consumption information and control solution is based on the iDigi platform and Digi X-Grid solution.

The companies say they will work together in advancing the European smart metering market. During the development process, GEO will have the full support of the Digi X-Grid solution - a development package that includes Digi's Smart Energy gateways, XBee ZigBee modules and adapters, and the iDigi Platform to provide secure, real-time access to devices within an extended grid infrastructure, Digi explains.
