Digi ERT/Ethernet Gateway Receives Itron Certification

in [News Departments](#) > [Products & Technology](#)
by [Renew Grid](#) on Thursday 10 March 2011

Digi International and QualityLogic Inc. say that the Digi ERT/Ethernet Gateway has successfully completed the testing under the Itron ChoiceConnect ERT Receiver Logo Program and has received logo certification. Under the program, QualityLogic tests the compatibility between Itron's ChoiceConnect meter messages and devices from vendors that have licensed Itron reading technology, certifying interoperability.

Digi's ERT/Ethernet Gateway is designed to bring smart grid technology to the millions of utility customers who use meters that are enabled with Itron ERT radio technology. The integrated certified Itron ERT radio receiver enables metering data to be shared with the software application from the utility, energy service provider or consumer via homeowners' networking/IP connection to the Internet. The data can then be dynamically analyzed and presented to the customer to help identify areas to optimize energy use.
