Digi, Calico Develop Energy-Management Solution

in [News Departments](#) > [Products & Technology](#)
by [Renew Grid](#) on Thursday 20 January 2011

[Calico Energy Services](#), a provider of smart grid data management solutions and services for utilities and power providers, and [Digi International](#) have launched an integrated smart grid technology solution for energy management. The solution is built upon the Digi X-Grid platform, which provides device connectivity infrastructure, and Calico Energy's EIS platform, which provides a complete utility energy-management solution coupled with residential and commercial load control.

Digi says it chose to collaborate with Calico because its platform provides utilities with detailed visibility and analysis of energy consumption, identifies which combination of energy-management devices has the most dramatic impact on energy usage, and automates residential and commercial device control.
