GEO, Digi Team UP to Provide Energy Management Solution for European Utility Market

BY SMART METERING NEWS · FEBRUARY 14, 2011 · NO COMMENTS

SMART ENERGY NEWS · TAGGED: DIGI GEO ENERGY MANAGEMENT SOLUTION, DIGI GEO EWORLD

Green Energy Options (GEO) will collaborate with Digi International to develop a real-time, web-based energy management system for the European utility market. The announcement was made yesterday at E-World Energy and Water Exhibition in Essen, Germany.

The new energy consumption information and control solution is based on the Digi X-Grid solution – a development package that consists of Digi's Smart Energy gateways, XBee ZigBee modules and adapters, and the iDigi Platform to provide secure, real-time access to devices within an extended grid infrastructure.

Patrick Caiger-Smith, Chief Executive Officer at GEO, said: "Digi's expertise in the field of ZigBee wireless communications and its investment into their market-leading web based application framework, iDigi, make Digi our ideal partner in the energy management space."

Daniele Cognolato, Digi's Smart Grid Business Development Manager, said: "We are excited to be working together with GEO who are already an established leader in the European energy management market. Digi's X-Grid platform will enable GEO to move from visual display devices to complete visualization and control systems – a revolution in their aim of making energy visible."

Green Energy Options

GEO is a designer and manufacturer of energy monitoring systems for use in both the commercial and domestic environment, with over 1,200,000 energy displays presently in the European market.

Digi International

Founded in 1985 as DigiBoard, Digi International is the leader in commercial grade device networking and is an innovator of wireless machine-to-machine (M2M) device networking products.
