Lessoil selects Digi for wireless connection for energy conservation solution

Mar 09, 2011 (Datamonitor via COMTEX) -- Digi International has announced that Lessoil has selected Digi's ConnectPort X4 wireless gateway, XBee ZigBee environmental sensors and iDigi cloud service to wirelessly connect its energy conservation solution.

Lessoil provides energy conservation services and maintenance to multi-family property owners in the Northeast. Its solutions monitor and control a building's heating boilers and burners to eliminate waste, increase fuel efficiency and improve resident comfort.

Lessoil uses the ConnectPort X4 gateway to gather apartment temperature data from Digi XBee ZigBee temperature sensors. The gateway then communicates this data over cellular networks to the iDigi cloud service. Lessoil can login to the iDigi cloud service to easily monitor building temperature and make any necessary adjustments. Lessoil also uses iDigi for network set up.

Prior to Digi, we were using a connectivity solution that was slow and didn't offer any way to measure temperature in the building," said David Armstrong, project manager for building automation controls, Lessoil. "Other solutions with temperature measuring capabilities were cost prohibitive. Digi offered an off-the-shelf, cost-effective solution where everything just worked. Once we got the network set-up, everything was pretty much plug-and-play. It is very easy for us to add new sensors, more IO and other functionality."
