Connecting the Wireless Location and Monitoring World

Digi's cellular gateway

Digi International introduced the Digi ConnectPort X3, a low-cost, programmable cellular gateway for monitoring and tracking remote assets. The gateway features flexible interfaces—including ZigBee, RS-232 serial, and GPS—and provides global connectivity to remote devices and device/sensor networks by way of GSM GPRS cellular networks. The ConnectPort X3 is integrated with the iDigi Platform, a cloud-computing service that makes it easy to remotely manage devices and to integrate device information into a company's back-end systems and machine-to-machine applications. The ConnectPort X3 is shipped iDigi ready and will be available starting at \$249.
