Digi's wireless design service supports Freescale processor

-- Test & Measurement World, 3/15/2011 7:00:00 AM

Extending its collaboration with Freescale Semiconductor, Digi International's wireless design division, Spectrum Design Solutions, offers custom design support for companies developing wireless products based on Freescale's i.MX53 multimedia applications processor. Digi also furnishes a series of systems-on-modules based on the Freescale i.MX processor family, including the ConnectCore Wi-i.MX51 and the new ConnectCore Wi-i.MX53. "Spectrum Design Solutions is a leading provider of custom design services," said Ken Obuszewski, director of product marketing for Freescale's multimedia applications division. "Digi has the hardware and Spectrum the design expertise to help OEMs quickly develop production-ready solutions using our i.MX53 processor."

Rob Landers, VP of business development, Spectrum Design Solutions, added, "We help customers eliminate the effort and risk of a complex design without sacrificing the important design flexibility aspects. We have a long relationship with Freescale and the expertise to help organizations quickly and easily add wireless capabilities to their products using Freescale technology."

Spectrum Design Solutions offers complete hardware and software wireless design services, including wireless strategy consulting, custom antenna design, and product customization for specific customer needs.
