

DIGI TRANSPORT® LR54 LTE-A ROUTER

High speed. Rock-solid stability. Unmatched value.

When you are innovating to create a remarkable interactive customer experience, you need a network that keeps up. Digi offers the fastest, most stable router on the market—at the industry's most affordable price. The Digi TransPort LR54 is an LTE-Advanced router, designed from the ground up to provide peerless speed and connection integrity.

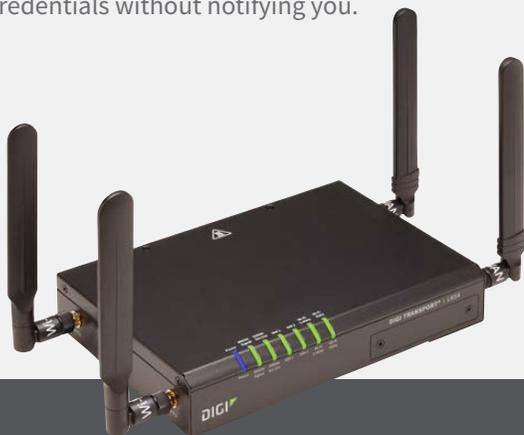

Create an Amazing Experience

Self-service kiosks. Digital signage. Tablet and smartphone interactivity. Seamless and pervasive connectivity is building stronger customer bonds. Don't let your vision for business-changing customer interactivity be dogged by poor network performance.

Digi TransPort LR54 is purpose-built for network applications like yours, delivering high speed LTE-A cellular networking and powerful, long-range Wi-Fi. It accommodates multiple users and heavy volume, across multiple kiosks, and location-to-location. This LTE-A router gives you the ability to interact with people without frustrating technical instability. Share real-time information, collect payments via credit card or new mobile applications, and gather customer data—securely—at the speed of hurried customers.

Ideal for Autonomous Networks

In situations where it is easier—and more secure—to “bring your own Wi-Fi network” rather than piggybacking on an existing third-party network, Digi TransPort LR54 is a turnkey, simple solution...and requires no land line. You won't have to worry about different IT groups meddling with your setup, or changing security credentials without notifying you.

Digi TransPort LR54 Performance Thrills

- ✓ **Maximum speed**—LTE-Advanced radio provides CAT6 speeds up to 300Mbps—2X the speed of current CAT 3 LTE
- ✓ **Powerful and reliable Wi-Fi**—featuring dual 2.4 and 5GHz radios, with 802.11ac
- ✓ **Rugged hardware**—industrial-grade construction, temperature hardened to operate at -20° C to +70° C
- ✓ **Enterprise security**—fortified by PCI-certified Digi Remote Manager® and Digi TrustFence™

Take it Outside

Digi TransPort LR54 is constructed with a heavy-duty aluminum enclosure that is sealed to withstand the elements, and tough enough to ward off physical intrusions. It provides thermal protection that keeps this LTE-A router running without fail in sub-zero winter weather and searing summer heat.

High Performance for Customer Kiosks and Connected User Experience

Digi engineers have turned your router wish list into our design roadmap. Digi TransPort LR54 is designed to bring the full advantages of LTE-A to your networks.

Security Compliance with Payment Card Industry (PCI) Standards

Digi Remote Manager finds and fixes inappropriate or inaccurate configurations before anyone can exploit them. It lets you define a device profile, assign the profile to all devices in a group, and monitor and auto-remediate any variance. It can also restrict incoming traffic to only allow secure connections, eliminating unencrypted or potentially compromised connections.

Low Cost of Ownership

Digi TransPort LR54 is priced significantly lower than its competitors. It carries a 3-year warranty. You'll pay no annual software fees. Plus, technical support is included at no charge.

Independent Connectivity You Can Rely On

Digi SureLink™ technology establishes and maintains persistent connections over cellular networks. You can trust that your customer experience will continue to perform flawlessly, even when you're not there.

Centralized Device Configuration and Remote Management

Digi Remote Manager gives administrators a single online dashboard for configuring and troubleshooting devices across multiple locations. They will be able to analyze network performance and check connectivity points at a glance, without physically visiting the problematic site.

Automated Updates

Digi TransPort LR54 automatically "phones home" to Digi Remote Manager to check for the newest firmware and to pull down any unique configurations.

Global Ready

Digi TransPort LR54 has a single, software-defined LTE radio that supports carriers across North America and most European countries. Rather than qualify and support multiple devices, Digi TransPort LR54 gives you a single part number to cover two continents. And it comes pre-certified for Verizon and AT&T networks.

Extreme Network Security

Gain peace of mind through Digi's PCI-certified Digi Remote Manager, firewall, built-in-VPN and 256 bit AES encryption. Digi TrustFence device security framework addresses common security vulnerabilities of remote devices, from authenticated boot and secure device access, to user validation and data encryption.

LTE-A speed: 300 Mbps
2x faster than
conventional LTE in
real world testing

The Digi solution for connected user experience:
Fast and stable. Durable and secure.
