Foundational Product Line Values	<ul style="list-style-type: none"> ✓ Reliability: Up to a 5-year warranty ✓ Security: Stateful firewall, integrated VPN, enterprise authentication and encryption ✓ Resiliency: Advanced routing protocols for network failover, Digi SureLink to monitor and re-establish connection 					<ul style="list-style-type: none"> ✓ Configurable: Adapt to your IoT application ✓ Rugged: Designed for years of field use ✓ Ease-of-Use: Application specific interfaces for easy installation 		

The Digi Digital Landscape Keeps Growing

Creating a more connected digital ecosystem requires the installation of communication infrastructure to accommodate the delivery of data to and from devices and facilities far and wide. Digi cellular solutions help you expand into areas previously too difficult to access, making your systems more productive, more responsive and more secure.

Total Cost of Ownership

Consider Digi for the lowest total cost of ownership compared to the competition. Digi includes many features in its already low prices such as a best-in-industry 5-year warranty, license free enterprise software and ongoing firmware updates.

Other manufacturers will charge individually for critical licensing, support and extended warranties. Calculate the total cost of ownership while researching cellular solution providers.

	Digi TransPort® Router	Competition
Example MSRP	\$299	\$349
5-year remote management license	\$105	
5-year license for advanced routing features	\$0	\$367
5 years of technical support	\$0	
5-year warranty	\$0	\$108
Per device cost for 5-year deployment	\$404	\$834

Digi Routers Are Network-Agnostic

Only Digi can supply you with the pre-certified cellular routers and gateways for use around the world...with the support and expertise you need to keep your mission-critical applications up and running.

3G/4G/LTE and LTE-A Global Deployment

- Network certification by major global carriers
- Regional Telco/trade certifications
- Over 200 Digi in-region technical support resources

When Security Matters Most

Cyber-attacks are a very hot topic – and a very real threat. That’s why Digi LTE routers support advanced VPN, firewall, encryption and authentication tools to ensure the highest cyber protection.

Digi TrustFence™ gives you built-in security that simplifies connecting devices in order to more easily integrate device security, device identity and data privacy capabilities. With immediate access to secure connections, authenticated boot, encrypted data storage, access-controlled ports and secure software updates, Digi TrustFence is engineering security into IOT devices that can grow and adapt to new and ever-evolving threats.

- Secure Boot** - Ensures only signed software images can run on a device
- Encrypted Storage** - Local file system encryption keeps internal device data safe
- Protected Ports** - Access-controlled internal and external ports prevent unwanted “back doors”
- Configuration Best Practices and Monitoring** - Support and guidelines for properly securing a device

Digi Remote Manager®

The one place to go to better manage, monitor, configure and protect all your remote devices.

Dashboard displays status of field devices and lets you complete tasks for entire network in minutes

Digi Remote Manager provides an efficient, cost-effective way to remotely monitor, update and manage routers over 3G/4G LTE.

- Set performance thresholds and inspect individual devices
- View the summary status of device groups
- Report and alert on performance statistics
 - Connection history and signal quality
 - Latency, data usage and packet loss
- Edit configurations and update firmware
- Over 175 security controls protect your data

Digi Remote Manager includes:

Device Health - Lets you set the performance parameters for healthy devices and create reports and alarms to stay ahead of network problems.

Compliance and Security - Lets you maintain security compliance (e.g., PCI, HIPAA, NIST) by defining a gold standard configuration, and then scanning and fixing any out-of-compliance devices.

Firmware Updates - Allows you to schedule firmware updates to groups of devices en masse.
