DIGI 6310-DX

Avoid network outages with primary or backup LTE connectivity; integrate seamlessly with existing infrastructure

The Digi® 6310-DX LTE cellular extender serves as an ideal failover solution by retrofitting your infrastructure for cellular network access. Powered by the Digi® CORE 1002-CM 4G LTE plug-in modem, dual SIM slots can further protect against downtime by automatically switching to a secondary cellular carrier should the primary SIM lose Internet access. A suite of Digi CORE 1002-CM plug-in modems let Digi enterprise routers leverage the category of LTE best suited for their use case — standard LTE, LTE with EV-DO fallback, or LTE-Advanced.

Couple the Digi 6310-DX with a dedicated wireline ISP connection to provide dual-WAN connectivity, maximize uptime and ensure business connectivity for connected devices that demand reliable network availability, such as POS systems, mobile kiosks and digital signage. Deployments are streamlined with installation accessories that include a disposable battery pack for site survey, (passive) PoE injector for optimizing placement for best cellular reception and a mounting bracket.

The Digi centralized management platform provides easy setup, configuration and support for installations of Digi and third-party devices. Digi Remote Manager® and aView ™ offer web-based device management solutions to securely monitor and control Digi enterprise routers and gateways -- and the health or your network -- after deployment.
