

Protecting Your Patient, Provider and Customer Data is Critical

Scalable, Remote Connectivity Solutions

Employee and public health and safety come first. But until the threat of the coronavirus (COVID-19) is under control, medical, healthcare and insurance providers need to carry on. For many organizations, that means resources working remotely. Yet home Wi-Fi can present risks to your HIPAA and security compliance protocols as well as proprietary data.

Fortunately, it is possible to mitigate the risks of data leakage and provide enterprise-level security at an affordable cost with solutions from Digi. Digi's cellular extenders deliver secure connectivity in a compact, all-in-one solution that integrates with your existing corporate infrastructure and supports secure VPN tunneling for maximum data security.

Keep track and protect of all your vital connections with one central management platform that enables compliance with security frameworks like HIPAA, PCI and NIST using Digi Remote Manager. With Digi Remote Manager, your IT team has remote access for complete control to easily and securely monitor and configure devices in the field. All of these solutions enable you to offer flexible work arrangements long into the future.

No one knows when the crisis will pass. But until it does, you can help your organization keep as close as possible to "business as usual" and be prepared for the future with scalable, secure, remote connectivity solutions from Digi.

Featured Products

Digi® 6310-DX

Digi 6310-DX is a scalable enterprise solution that lets you avoid network disruptions and outages with primary or backup LTE connectivity.
