

WIRELESS DESIGN SERVICES

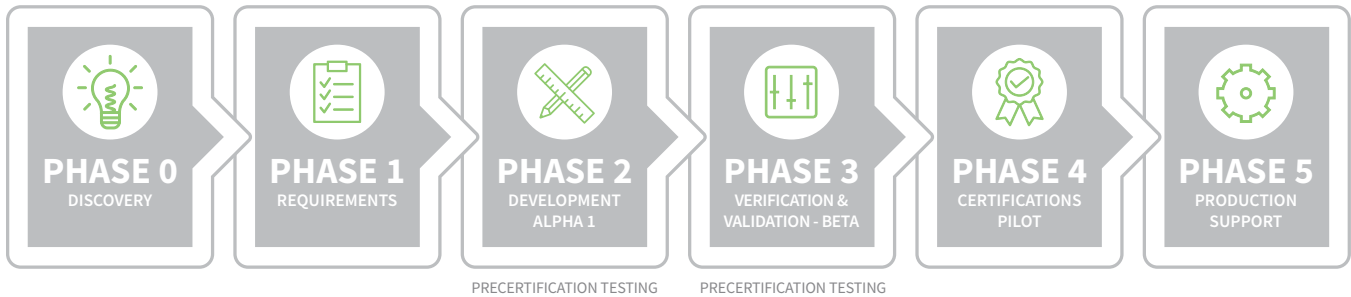

CERTIFICATION GUARANTEE

- We Guarantee Certification -

Is your company new to wireless product development? Have you considered switching to wireless technologies or adding cellular components to your products?

We can help! Wireless adds complexity to any project. It creates regulatory compliance and certification issues that can potentially delay your go-to-market timing by months. Don't let that happen to your next high profile endeavor. Digi WDS guarantees that any project we design from start to finish using our standard development process will meet all FCC and carrier certification requirements listed in the applicable SOW.*

Our Standard Product Development process includes:

...and the following processes:

- ✔ Worldwide certifications: FCC, IC, EN, CE, PTCRB, AT&T, Verizon, etc
- ✔ Three-dimensional RF simulation with enclosures
- ✔ Component selection to meet cost, performance and certification requirements
- ✔ Careful schematic design and thorough reviews
- ✔ PCB layout with vigilant constraint management and engineering reviews
- ✔ Prototyping and in-house lab testing against critical certification requirements
- ✔ Software design meeting wireless standards
- ✔ Software tuning for wireless performance

In many instances we have passed certification requirements with the Alpha revision. Our guarantee is based on our standard process. This process includes three revisions of the circuit boards to meet certification requirements: Alpha, Beta & Pilot Production. Each revision may include changes to assembly and PCB files.

* The guarantee is subject to conditions and limitations stated in our standard terms.
