1 Verify your components

<table>
<thead>
<tr>
<th>Included equipment</th>
<th>Required additional equipment</th>
</tr>
</thead>
<tbody>
<tr>
<td>TransPort WR11</td>
<td>Personal computer</td>
</tr>
<tr>
<td>Cellular antennas</td>
<td>Ethernet cable</td>
</tr>
<tr>
<td>Power supply</td>
<td>SIM card(s) - mini-SIM (2FF) size</td>
</tr>
<tr>
<td>Power supply adapters (non-US models only)</td>
<td></td>
</tr>
</tbody>
</table>

Contact a preferred carrier or the distributor for your device to inquire about cellular service options.

2 Connect the hardware

1. Open the SIM door. Using your finger, slide the SIM door out and lift up.
2. Insert the SIM card(s) as shown, with the notch facing the bottom-right corner of the device. If you are using one SIM card only, insert it in the SIM 1 slot.
3. Close the SIM door.
4. Connect the primary and secondary cellular antennas to the respective antenna connectors on the unit.
5. Connect the plug end of the 5-volt power supply to the power connector on the unit, and plug the other end into a wall outlet. Insert the power supply end fully and rotate clockwise to engage and lock.
6. Connect one end of the Ethernet cable to the Ethernet port on the unit and the other end to an Ethernet port on a PC.

Note Two antennas are required for normal operation of this device.

Note Position the Digi TransPort WR11 on a flat, level surface in a location with adequate ventilation. The unit is designed for indoor use. Do not expose the unit to extreme heat or cold, strong magnetic fields, or liquids.
3 Run the Getting Started Wizard

If your PC is configured to automatically get an IP address, it can obtain the IP address from the TransPort WR11. Otherwise, make sure your PC can connect to the network 192.168.1.0 (255.255.255.0).

1. Enter 192.168.1.1 into the address bar of the web browser.

2. The first page of the Getting Started Wizard appears. This wizard guides you through initial configuration of your TransPort device.
   - To run the wizard, click Get Started.
   - To manually configure the TransPort device, click Skip Wizard.

   Note: The default username and password for logging in to the TransPort device are username and password.

4 View the TransPort LEDs and startup states

![TransPort WR11 LED Diagram]

Service LED: Indicates the presence and level of cellular service running on the device.

- Off: No cellular service
- 1 blink: GPRS mode
- 2 blinks: EDGE mode
- 3 blinks: UMTS mode
- 4 blinks: HSDPA mode
- 5 blinks: HSUPA mode
- 6 blinks: LTE mode

Signal LED: Indicates the strength of the cellular signal.

- Off: Poor or no signal. Place the device in a location where it gets a better signal.
- Amber: Fair
- Green: Good

Power LED:

- Off: No power
- Green: TransPort device is powered

After the Getting Started Wizard completes, the TransPort web interface appears. For additional configuration, use the web interface and refer to the Digi TransPort User Guide and Application Notes on the Digi website at www.digi.com/support/TransPortWR11.
